

Manufacturing Business Intelligence

helping manufacturers achieve high levels of operational excellence
by detecting, analyzing and eliminating production losses

Feature

Operational Excellence Benefit

Real-time plant status

Data-driven operational decisions with one version of the truth

Real-time key performance indicators

Change behavior with aligned focus on the most important metrics

Downtime by fault and root cause

Data-driven maintenance improvement strategies

Spoilage by defect and machine

Data-driven quality improvement strategies

Configurable event alerts

Focus on important information and filter out nuisance data

Historical data analysis

Verification of improvements and trend identification

Coil usage

Coil footage tracking and quality monitoring

Process consumables usage

Natural gas, lacquer, and cleaner management

Bottleneck analysis

Machine purchase or improvement decision support

Changeover tracking

Validate procedural changes and identify training opportunities

Configurable technology

Supports rapid changes and expansions
